Driving innovation and agility to improve customer experience with Google Cloud

Sequis life

FISClouds helped jump-start the setup of DevOps Env and helped set up the architecture for Google Cloud using the Anthos platform slated to manage Sequis Life's hybrid, multi-cloud environment leveraging the best practices and automation.

Industry: Financial Services
Project Location: Indonesia

Sequis is the primary corporate identity that houses PT Asuransi Jiwa Sequis Life and other businesses. Established in 1984, Sequis Life now serves Indonesian people through seven customer service centers in six cities, Jakarta, Medan, Bandung, Surabaya, Denpasar, and Semarang, as well as 80+ sales offices in 28 cities in Indonesia.

Challenge

FISClouds proposed Anthos along with the Infra as Code, DevOps, and GitOps practices for SequisLife. Anthos helps manage various Kubernetes deployments across on-prem, GCP, and other clouds. Implementation of Anthos Config Management, Infra as Code with Terraform and GitOps enabled standardization by enforcing various policies across clusters.

Solution

FISClouds suggested the implementation of GCP BigQuery as a solution for the data warehousing requirements, along with the utilization of Cloud Data Fusion to manage the execution of 2100 ETLs across all environments.

Result

FISClouds successfully helped set up the DevOps Environment and architecture for Google Cloud using the Anthos platform. In the end, the SequisLife Innovation Lab team was able to get a flexible, scalable, and highly available infrastructure which gave them the speed to innovate new products quickly and bring them to market at record speed.
